

FEVR's Vision for the future is one where

We come as close as possible to zero deaths and serious injuries in road traffic.

We promote active mobility, healthy and environment friendly, with effective safety for pedestrians and cyclists.

We consider a better post crash response where medical care, investigation and justice are the three key issues to be better considered.

We, as voice of road victims since 1991, are heard, supported and included in decision making on national, European and global level.

World Day of Remembrance, each 3. Sunday in November, is supported by all who want to help raise awareness on these issues.
